ABSTRACT

Now days a herbal and traditional medicines mostly used in all over the world according to WHO, about 60 to 65% world population practicing herbal and traditional medicines. Vitex negundo Linn. is an aromatic herb belong to family Verbenaceae. It is also known as Nirgundi, Five leaved chaste tree. Plants have many chemical constituents as flavonoids, volatile oil, triterpenes, diterpenes, sesquiterpenes, lignan, flavones, glycosides, iridoid glycosides and stilbene derivative. These chemical constituents are present in each part of the plant. Vitex negundo extract have various pharmacological activities such as anti-inflammatoriy, antipyretic, anti-arthritis, antioxidant, analgesic activity, antibacterial activity, antitumor activity, anti-annelise activity, anxiolytic activity, Nephroprotective activity, anti-HIV activity, Antitubercular activity, anti-tesinophilic activity, anti-snake venom activity. This review article provides depth information related to plant morphology, cultivation, chemical constitutes, pharmacological activities and their medicinal uses.

Keywords: Vitex negundo, Nirgundi, Casticia, Anti-Gout Activity

INTRODUCTION

Vitex negundo Linn is a large aromatic shrub (commonly known as Nirgundi, Five leaved chaste tree) belonging to the family Verbenaceae. Almost all the parts of this plant possesses great medicinal values and it is employed as a remedy in various traditional systems of medicine like Ayurveda, Chinese, Siddha and Unani to treat various diseases. In Indian traditional medicine system Vitex negundo Linn is referred as ‘sarvaroganivarant’- the remedy for all diseases. A popular local name of the Bengali in the western Himalayan area of India. It is useful in many diseases and eliminates the disease with a brush. A lot of chemicals are found in vitex negundo. Nirgundi in Sanskrit means which protects the body from diseases.

VERNACULAR NAMES

Assamese - Aslok, Pochata
Bengali - Beguna, Nishinda,
Hindi - Nirgundi, Sambhalu,
Kannada - Karilakki, Laklagida,
Malayalam - Karunocci, Noch-chi,
Marathi - Nirgunda, Nengar,
Oriya - Thinghla, Nilgundi.
Sanskrit - Nirgundi, Sindhuvara
Tamil - Nallanocci, Nochi,
Telgu - Nallavalli, Sindhuvvaruma,
Urdu - Sambhalu, Tukhmsambhalu.

CODEN (USA): JDDTAO
PLANT DESCRIPTION

Vitex negundo Linn is a woody, erect and large aromatic deciduous shrub which grows to small tree of height 2-8 m height. The bark is usually reddish brown. The leaves are penta foliate and the leaflets are arranged palmately and terminal leaflets are long (4-10 cm) acute with petiolate(1-1.3 long). Lanceolate, hairy beneath and both the ends are pointed. The flowers are numerous which are bluish purple in colour and in branched in tomatoes cymes and the fruits are round, succulent and black on ripening with four seeds.

GEOGRAPHICAL DISTRIBUTION:

It grows in humid places or along water courses in wastelands and mixed open forests and globally distributed in Afghanistan, Pakistan, India, Shri Lanka, Thailand, Malaysia, Eastern Africa and Madagascar, America, Europe, China and West Indies.

PHYTOCHEMICAL CONSTITUENTS:

In Preliminary phytochemical study of the extract was analysis for the presence of volatile oil, triterpenes, diterpenes, sesquiterpenes, lignan, flavonoids, flavones, glycosides, iridoid glycosides and stilbene derivative. The detailed of phytochemical constituents is present in each part of the plant is given below.

Leaves:

The various chemical constituents present in leaves of Vitex negundo Linn leaves are Friedelin, vitamin-C, carotene, casticin, artemetin, terpinen-4-ol, α-terpineol, sabenine, globulol, spathulenol, β-farnesene, farnesol, bis(1,1dimethyl) methylphenol, α-pinene, β-pinene, linalool, terpinyl acetate, caryophyllene epoxide, caryophyllenol, vitexicarpin, viridiflorol, 4,4’- dimethoxy-trans-stilbene, 5,6,7,8,3’4’- heptamethoxy, 5-hydroxy-6,7,8,3’4’-pentamethoxy (5-O demethylhobiletin), 5-hydroxy-6,7,8,3’4’-5-hexamethoxy (gardenin A), 5-hydroxy-6,7,8,4’- tetramethoxy (gardenin B), 5-hydroxy-7,3’,4’,5’- tetramethoxyflavone (corymbosin), terpinen-4-ol, α-copaene, β-caryophyllene, β- elemene, camphene, α-thujene, α-pinene, sebinene, linalool, steaic acid and behenic acid, α-elemane, δ-elemene, β-elemene, β-eudesmol, camphor, camphene, careen, 1,8- cineol, 1-octen-3-ol, γ-terpinine, α-phellendrene, β-phellendrene, α-guaiene, abieta-7,13-diene, neral, geranial, bornyl acetate, nerol, β-bisabolol, cedrol, 2’-p-hydroxybenzoyl mussaenosidic acid, agnuside, lagundinin, aucubin viridiflorol, squakene, 5-hydroxy-3,6,7,3’,4’- pentamethoxy flavone, 5-hydroxy-3,7,3’,4’- tetramethoxy flavone, 5,3-Dibutanyloxy 3,6,7,4’ tetramethoxyflavone, 5,3’- Dipentyloxyloxy 3,6,7,4’ tetramethoxyflavone, 5,3-Dihexanoyl 3,6,7,4’ tetramethoxy flavone, betulinic acid, ursolic acid, dimethoxyflavonone,
5,3’-dihydroxy-7,8,4’-trimethoxy flavonone, 7,8-Dimethyl herbacetin-3-rhamnosoide, vitexinoseide, 1,4a,5,7a tetrahydro 1ßDglucosyl(3’,4’-dihydroxybenzoyloxymethyl)-5-
ketocyclopenta pyran-4-carboxylic acid, luteolin-7-O-ß-D-
glucosid, 6’-p-hydroxybenzoylmussaenosidic acid.

**Figure 3: Different chemical constituents of Vitex negundo leaves**

**Seeds**

The seeds of *Vitex negundo* Linn have chemical constituents such as n-Tritriacanthone, n-hentriacontanol, hentricantone, n-nonacosane, ß-sitosterol, phydroxybenzoic acid and 5-
oxoisophthalic acid, 3, 4-dihydroxybenzoic acid, artemetin, 3ß-acetoxyolean-12-en-27-oic acid, 5ß-hydro-8,11,13-
abietatrin-6-ol, 2a,3α-dihydroxyolea-5,12-dien-28-
oicacid, 2ß,3α-diacetoxyolea-5,12-dien-28-oicacid and 2a,3ß-diacetoxy-18-hydroxyolea-5,12-dien-28-oic acid,
vitedoin A, vitedoamine A, vitedoamine B, 2ß,3α-
oic acid, 2β,3α-

**Stem and bark**

The various chemical constituents present in the stem and bark are 3,6,7,3’,4’-Pentamethoxy-5-Oglucopyranosyl rhamnosoide, vitexin caffeate, ß-amyrin, epifriedelinol and oleanolic acid, Hepta methyl-phenyl-cycloctasiloxane, Cycloheptasiloxane, tetradecamethyl Nona methyl, phenyl-
cyclopentasiloxane, Cyclodiacasiloxane, hexadeca methyl, Borazine, 2,4,6-tripheny-11, 3,5-trypohil, Tetracosamethyl cyclododecasiloxane, pentamethyl phenyl-Disilane, Heptasiloxane, Octadecamethyl, cyclomasisiloxanes Cyclodiacasiloxane, hexadeca methyl, ß-hydroxy benzoic acid, ß-sitosterol, 5-hydroxy-3,6,7,3’,4’-pentamethoxy flavone, 3ß-

acetoxy-olean-12-en-27-oic acid, 3ß-hydroxy-olean-5, 12-
dien-28-oic acid.

**Roots**

Vitexoside, agnuside, R-dalbergiphenol, negundin A, negundin B, 6-hydroxy-4-4-(4-hydroxy-3-methoxy)-3-
hydroxymethyl-7-methoxy-3,4-dihydro-2-naphthaledehyde, vitrofusal E, (+)-lyoniresinol, (+)-(-)-pinoresinol, and (+)
diisyringaresinol, 2ß,3α-diacetoxyolea-5,12-dien-28-oic acid;2a,3ß-diacetoxyolea-5,12-dien-28-oic acid, 2a,3ß-
diacetoxy-18-hydroxyolea-5,12-dien-28-oic acid, vitexin and isolovetin, acetyl oleaenic acid, sitosterol, 3-formyl-4,5-
dimethyl-8-oxo-5H-6,7-dihyronaphthofuran (a new furanoeremophilane).

**Essential oil of fresh leaves, flowers and dried fruits**

The various chemical constituents of essential oil of from leaves, flowers and dried fruits are ß-guaiene, guaia-3,7-
diene,caryophyllene epoxide, ethyl-hexadecenoate; ß-
seline, germacren-4-ol; caryophyllene epoxide, (E)-nerolidol, ß-selinene, ß-cedrene, germacrene D, hexadecanoic acid, ß-pyrene and valencene, viridiflorol (19.55%), ß-caryophyllene (16.59%), sabine
(12.07%), 4-terpineol (9.65%), γ-terpinein (2.21%), and caryophylleneoxide (1.75%), 1-oceten-3-ol (1.59%), and globulol (1.05%).
PHARMACOLOGICAL ACTIVITIES

1. Anxiolytic Activity:
Sharma A et al., 2018 investigated the anxiolytic activity of different parts, i.e. leaves, stems and roots of *V. negundo* by different solvents as like petroleum ether, chloroform, ethanolic and aqueous extract of *V. negundo* for anxiolytic activity using elevated plus maze model. Among the different parts compared, only the roots showed significant anti-anxiety activity. Chloroform and ethanolic extracts of the roots showed maximum significant anti-anxiety activity, compared to that of diazepam. Adnaik RS et al., 2008 analyzed anxiolytic activity of an ethanolic extract prepared from the roots of *V. negundo* using the elevated plus maze and light-dark exploration test in mice. Diazepam and the *V. negundo* extracts did not produce any overt motor dysfunction. These results indicate that *Vitex negundo* is an effective anxiolytic agent. In conclusion, the action of extract upon the anxiety models.  

2. Analgesic
Yasmeen A. et al., 2017 evaluated both the peripheral and central analgesic activity of ethanolic extract of *Vitex negundo* flowers in experimental animals. This activity was evaluated for peripheral analgesic activity by the acetic acid induced writhing test and central analgesic activity by the tail flick method respectively using aspirin as the standard drug. This study showed that the increased analgesic effects which was comparable with that of the standard drug aspirin at in writhing test and produced greater analgesic activity than that of standard drug aspirin at dose in tail flick method.  

3. Antitubercular Activity
Ladda PL et al., 2016 investigated the focused on identification, isolation, characterization of lead constituents and to determine the Antitubercular activity of their isolated compounds by nitrate reductase assay method. The leaves extract with ethanol by soxhlet extraction and ethanolic extract separated in petroleum ether, chloroform and methanol. The petroleum ether and chloroform fractions of ethanolic extract which contains shows anti-tuberculosis activity. This study showed that the ethanolic extract with significant anti-tubercular activity.  

4. Nephroprotective Activity
Janakiraman M et al., 2015 investigated the Nephroprotective activity of methanolic extracts of *Vitex negundo* leaves extract on nephrotoxicity induced by cisplatin in male albino rats. This study showed that the methanolic extracts of *Vitex negundo* treated group also showed an increased in levels of Hb, RBC, WBC, PCV, MCV and MCHC when compared to cisplatin treated rats. The results of this study were concluded that *Vitex negundo* protected the rats from the deleterious effects of cisplatin.  

Kumar GS et al., 2011 studied the Nephroprotective activity of methanolic extracts of *V. negundo* bark against chemical induced kidney damage by single oral administration of paracetamol in male Wistar rat. The studied by assessing the biochemical parameters such as serum glutamate pyruvate transaminase, serum glutamate oxaloacetate transaminase, alkaline phosphatase, Bilirubin, total protein and enzymatic antioxidants. This study showed that significant reduction on biochemical parameters as well as enzymatic and non-enzymatic antioxidants when compared to the paracetamol induced kidney toxicity. The result showed that the methanolic extract of *Vitex negundo* bark has protected the kidney from paracetamol induced toxicity.  

5. Anti-Inflammatory activity
Gangwar AK et al., 2015 investigated anti-inflammatory effect of ethanolic roots extract of *Vitex negundo* action was studied by Plethysmometer method. It is observed that the ethanolic roots extract of *Vitex negundo* showed more considerable anti-inflammatory effect by using carrageenan induced rat paw edema method. Singhp et al., 2009 evaluated anti-inflammatory activity of ethanolic roots extract of *V. negundo* in carrageenan induced rat paw oedema method for acute inflammation. The ethanolic extract of *Vitex negundo* has showed related activity to that of standard drug. This study showed that the ethanolic extract exhibited remarkable anti-inflammatory activity to standard drug of Indomethacin.  

6. Anti-Snake Venom activity
Durairaj B et al., 2014 observed the anti-snake venom activity of hydroethanolic extracts of *Vitex negundo* leaves. The study showed that blue leaf extract of *Vitex negundo* has more potent antioxidant and anti-snake venom neutralizing effect. Alam MI et al., 2003 investigated the anti-snake venom activity of root extract of *V. negundo* This plant extract significantly antagonized the *viper a russellii* and *najaalouthia venom*. The observed confirmed that the plant extract possesses potent snake venom neutralizing capacity and need further investigation.  

7. Antieosinophilic activity
Sharma A et al., 2013 studies the antieosinophilic activity of petroleum ether leaves extract of *V. negundo* in guinea pig by using egg-albumin induced antieosinophilic activity. This study showed that petroleum ether extract of *Vitex negundo* reduce bronchial hyper responsiveness, asthma and various inflammation, immunology, allergy diseases.  

8. Antibacterial activity
Kamruzzaman M et al., 2013 evaluated the antibacterial activity of *Vitex negundo* leaves extracts in water and methanol. *V. negundo* leaves were evaluated against enteric bacterial pathogens by using standard disc diffusion, viable bacterial cell count methods, the first time we showed that methanol extract of *Vitex negundo* exhibited strong bactericidal activity both in-vitro and in-vivo conditions.  

Chowdhury JA et al., 2009 studies the antibacterial activity of methanol crude extract of *Vitex negundo* using kupchan method, disc diffusion method and brine shrimp lethality bioassay respectively. It is observed that the methanolic extract of *Vitex negundo* showed more prominent zone of inhibition against a number of bacterial and fungal activity. It is a compared to the standard drug.  

9. Antipyretic activity
Miskin N et al., 2012 to investigate the antipyretic activity of leaf extracts of *Vitex negundo* Linn by using yeast induced pyrexia model in Wistar Albino rats. The data obtained indicate that the Petroleum ether and Methanolic extracts of a leaves of *Vitex negundo*, through per oral route showed the significant reduction in yeast provoked elevated temperature. Both petroleum ether extract and methanolic extract showed significant antipyretic activity.  

Tirumalasetty J et al., 2012 investigated the antipyretic activity of alcoholic extract of *Vitex negundo* in PGE1 induced
pyrexia in Albino rats. It is observed that the ethanolic leaves extract of *Vitex negundo* shows more considerable antipyretic effect by using pyrexia models and hyperpyrexia model in albino rats.  

10. **Anti HIV Activity**

Kannan M et al., 2012 observed the activity of ethanolic leaf extract of *Vitex negundo* against HIV-1 Reverse Transcriptase and to identify and quantify the flavonoids present. The plant *Vitex negundo* ethanolic leaf extract exhibited the most notable activity of 92.8% against HIV-1 Reverse Transcriptase. This analysis revealed the presence of steroids, triterpenes, alkaloids, flavonoids, antroquoine glycosides and amino acids. Approximately seven flavonoids tested, six were identified in the decreasing order of quantity as kaempferol, myricetin, quercetin, quercetagetin, isorhamnetin and Luteolin. This study showed that the plant *Vitex negundo* leaf possess anti-reverse transcriptase substances and probably the flavonoids act as anti-virus agents.  

11. **Anti-Arthritic activity**

Abhirao R. A et al., 2012 studies the anti-arthritic property of petroleum ether and fresh aqueous extracts of leaves of *Vitex negundo* were studied for anti-arthritic activity against formalin induced arthritis in Wister albino rats of either sex. Both the extracts were found to significantly inhibit the paw edema induced arthritis by formalin induced in rats. The results indicate that aqueous extract of *Vitex negundo* Linn. Leaves had significant anti-arthritic property when compared with the standard and untreated control.  

Petchi RR et al., 2011 studies the anti-arthritic effect of ethanolic extract of leaves of *Vitex negundo* in male albino Wistar rats using Freund’s complete adjuvant model. The leaves were extracted with petroleum ether by hot percolation method. The male Wistar rats were used for the chronopharmacological and anti-arthritic study. This study concluded that the leaves extracts of *Vitex negundo* showed significant anti-arthritic activity against Freund's complete adjuvant-induced arthritis in male Wistar rats.  

12. **Anti-Amnesic activity**

Kanwal A et al., 2010 observed the anti-amnesic activity of aqueous extract of *Vitex negundo* in scopolamine induced amnesia in rats. The aqueous extract of *Vitex negundo* has showed related activity to that standard drug. This study demonstrates that aqueous *Vitex negundo* extract has potential therapeutic effects on improving the anti-amnesic activity in rats through inhibiting lipid peroxidation, augmenting endogenous antioxidant enzymes and decreasing acetyl cholinesterase activity in brain.  

13. **Antitumor activity**

Chitra V. et al., 2009 investigated the antitumor activity of the ethanolic extract of leaves of *Vitex negundo* has been evaluated against Dalton’s ascetic lymphoma in Swiss albino mice. This study was increased the life span to assess tumor volume, tumors cell count, viable tumors cell count, mean survival time. The result increased that ethanolic leaves extract of *Vitex negundo* has had more significant antitumor activity when compare with the standard drug.  

14. **Antioxidant activity**

Kulkarni RR et al., 2008 evaluated the excellent antioxidant potential activity of methanolic extract also exhibited a strong free radical scavenging activity by 1,1-diphenyl-2-picrylhydrazyl method and caused a significant reduction. The formation of thioharbharic acid binding the substances when evaluated forth the lipid peroxidation inhibitory in antioxidant activity.  

**TRADITIONAL MEDICINAL USE**

It is widely used in folk medicine, particularly in South, Southeast Asia, India and many others country used this plant. *Vitex negundo* is used for treating stored garlic pests as a cough remedy in the Philippines. It is also used to control mosquitoes. In Malaysia, it is used in traditional herbal medicine for women's health, including treatments for regulating the menstrual cycle, fibrocystic breast disease and post-partum remedies. It has antiseptic, astringent, anti-inflammatory and antipyretic properties.  

**CONCLUSION**

Nirgundi is a chief medicine of traditional system as well as Ayurveda. Almost all parts of the plant are used in preparing herbal medicines. The plant is known to possess anticancer, antimicrobial, antifeedant, anti-inflammatory, antihyper-pigmentation, hepatoprotective, antihistaminic, analgesic and related activities. This review attempts to encompass the available literature on *Vitexnegundo* with respect to its traditional uses, chemical constituents and summary of its various pharmacological activities. *Vitex negundo* possesses numerous biological activities proved by many experimental studies. It represents a class of herbal drug with very strong conceptual base for its use. Thus, this plant has great potential to be developed as a drug by pharmaceutical industries, but before it recommending it for clinical use in these conditions, there is a need to conduct clinical trials and prove its clinical utility.
